PROJECT SUMMARY: All-Trans Inc is a transmission repair shop based in Greenville, South Carolina. With over 30 years experience repairing automatic and manual transmissions as well as transfer case repair, rebuilding and replacement, All-Trans has earned the reputation of the “Transmission Experts” in Greenville.

Because the nature of their automotive repair business requires working with tools in a complex, hands-on environment, All-Trans was in need of a lighting solution that would improve visibility and safety in their shop. Luckily, the NetZero USA lighting experts were up to the task, sourcing a LED solution from their local Greenville office right down the road.

NetZero USA’s turnkey lighting project involved retrofitting various LED lighting products into existing fluorescent light fixtures. A combination of 30-watt, 40-watt, and 60-watt LED Retrofit Kits were used in various parts of the facility, replacing outdated and often burnt-out T12 fluorescent lamps.

As a result, the Transmission Experts at All-Trans are now benefiting from a better, brighter work space, and the shop owner is saving money each month through energy efficiency. Thanks to NetZero USA’s innovative financing options, this project was cash-flow positive from day 1, providing over \$238 in savings each month. **And over the next 10 years, more than \$29,000 dollars in cumulative savings will be delivered as a direct result of this project.**
